EDUCATION

Nanyang Polytechnic

Expected Apr 2028

Diploma in Applied Artificial Intelligence & Analytics

Activities: Sub-Committee Member, NYP Cloud Computing and NYP Ladies in Tech; NYAA Community Leadership Initiatives, Gold Award in progress with 80+ service hours

WORK EXPERIENCE

Hatch - Digital skills social enterprise, Singapore

May 2022 - Jun 2022

UX / Product Design Intern

- Designed mood boards and lo-fi wireframes in Figma for a website redesign at a youth digital skills social enterprise, translating the organisation's values into a visual direction and prototyping a live chat feature.
- Secured the attachment through Crater's METEOR Programme, supported by the National Youth Council, leading group discussions and teaching workshop content to peers.
- Worked independently across the month-long attachment, learning and applying unfamiliar design tools; cited by Hatch's founder for diligence and consistency.

PROJECTS

EstateOps - Estate Defect & Lift Inspection Platform

Selected for client presentation with EM Services (Sembawang Town Council); owned three use cases

- Built the manager dashboard in React on seven role-gated **PostgreSQL** endpoints with nine dashboard panels, three of them drilling through to the underlying inspection records.
- Forecast maintenance spend three months ahead using **damped trend exponential smoothing**, with an 80% confidence band and walk-forward backtesting against held out months.
- Built vendor onboarding, renewal, contract lapse suspension and audit trail behind Express role middleware, and generated client decks with PptxGenJS.
- Wrote **391 unit tests** across 32 files in Jest and Vitest, mocking Postgres, Supabase, Cloudinary and OpenAI.

DeadlineIQ - Serverless Assignment Prioritiser

Owned 8 of 23 use cases on a four-person team

- Built the **priority engine** scoring every assignment on urgency decay, grade stakes, capacity ratio, progress deficit and deadline clash, normalised under tunable weights.
- Kept scoring deterministic: the LLM narrates a result, never produces one, so any ranking reproduces by hand.
- Built explanations, Focus Mode, milestones, crash week detection, study plans and a Chart.js workload heatmap.
- Deployed Node.js handlers from a shared **AWS SAM** template, with DynamoDB reads served by a secondary index and partition scoped per user.

Genlink - Intergenerational Community Platform

Outstanding Project Presentation, NYP Web Development Project

- Built Python/**Flask** authentication with multi-step signup, lockout after three failures and cryptographically signed reset tokens over Gmail SMTP with TLS.
- Added **Google OAuth 2.0** login with CSRF state verification and live translation across 132 locales.
- Enforced Unicode name validation, password complexity rules and session saved signup drafts on MySQL.

HACKATHONS

- **AWS × NYP Cloud Hackathon 2026 - 2nd place**, Problem Statement PS-3. Built **DeadlineIQ** with a team of four.
- **SUSS Analytics & Visualisation Challenge 2026 - 3rd place**. Tableau dashboard on 10,869 live orders from Social Gifting, a Singapore social enterprise, built in two hours.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, SQL, HTML/CSS
- **Frameworks & Data:** React, Node.js, Express, Flask, Chart.js, Bootstrap, PostgreSQL, MySQL, Supabase
- **Cloud & Tools:** AWS (Lambda, DynamoDB, API Gateway, SAM), Tableau, Power BI, Git/GitHub
- **Certifications:** SnowPro Associate (Snowflake), PCEP Certified Entry-Level Python Programmer
